

ESS Trading Lab - 8AM Continuation Setup

HeyGen Production Package

Video Title: 8AM Continuation Setup – Retest. Reclaim. Confirm.

Length: 90 Seconds

Style: Professional Institutional Trading Education

Audience: Futures Traders (NQ, ES, YM, RTY)

HEYGEN NARRATION SCRIPT

Most traders chase breakouts. Professional traders wait for confirmation. Today we're examining the 8AM Continuation Setup and the logic behind its entry signal.

The process begins with a valid 8AM Buy signal. Price breaks above the opening range high, indicating bullish momentum and potential expansion.

Instead of entering immediately, the algorithm waits for a retest. The one-minute low must dip back below the range high, testing whether support is holding.

Once the retest is confirmed, price must close back above the range high. This reclaim demonstrates that buyers remain in control.

The continuation signal is designed to capture the next phase of the trend after support has been successfully tested and defended.

The sell continuation follows identical logic in reverse. Price breaks below the range low, retests the level, and then closes back below it.

Remember the five requirements: a valid signal, a retest, a reclaim, completion within sixty minutes, and only one continuation signal per session.

The continuation model is not searching for momentum. It is searching for evidence. Evidence that a key level was tested. Evidence that the level held. Evidence that buyers or sellers remain in control.

The breakout gets attention. The retest reveals conviction. The reclaim provides confirmation. And confirmation creates opportunity.

The market speaks first. The trader listens. The algorithm verifies. The trade executes.

HEYGEN SCENE PROMPTS

Scene 1 – Opening Hook:

Show a dark TradingView-style chart with the 8AM range highlighted. Label Range High and Range Low. Professional trading education style. Clean, modern, institutional aesthetic.

Scene 2 – Valid Buy Signal:

Price breaks above the 8AM range high. Display a green marker labeled VALID 8AM BUY. Subtle chart zoom and glowing breakout level.

Scene 3 – Retest:

Price pulls back and the one-minute low dips below the range high. Highlight the retest level. Display RETEST DETECTED.

Scene 4 – Reclaim:

Green candle closes back above the range high. Large BUY CONTINUATION arrow appears. Display LEVEL RECLAIMED.

Scene 5 – Expansion:

Price accelerates higher. Display sequence: Valid Signal → Retest → Reclaim → Continuation.

Scene 6 – Sell Example:

Mirror image of buy setup. Breakdown below range low, retest above level, close back below level. Display SELL CONTINUATION.

Scene 7 – Failed Continuation:

Show breakout and retest but no reclaim. Display NO SIGNAL – NO TRADE. Red X appears over chart.

Final Scene:

Dark background. ESS Trading Lab branding. Display: Trade Confirmation, Not Emotion. Display: Retest. Reclaim. Confirm. Execute.
